	10/719,185	SLEPNEV, VLADIMIR I.			
Office Action Summary	Examiner	Art Unit			
	Kenneth R. Horlick	1637			
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Application/Control Number: 10/719,185

Art Unit: 1637

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. While the current title includes "apparatus", all the pending claims are drawn to a method.

2. Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains. If the patent is of a basic nature, the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure. If the patent is in the nature of an improvement in an old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement. In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or use thereof. If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

## Where applicable, the abstract should include the following:

- (1) if a machine or apparatus, its organization and operation;
- (2) if an article, its method of making;
- (3) if a chemical compound, its identity and use;
- (4) if a mixture, its ingredients;
- (5) if a process, the steps.

Extensive mechanical and design details of apparatus should not be given.

Application/Control Number: 10/719,185

Art Unit: 1637

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Page 3

Claims 1-34, 47, and 63 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- A) Claims 1-34 are confusing because independent claim 1 lacks typical transitional language suitable for method claims, such as "comprising". Thus, the scope of the claims cannot be determined. Correction is required.
- B) Claim 47 is confusing because although it would appear that the three recited amplification methods are intended to be used in the alternative (or), they are recited as inclusive (and). Clarification is required.
- C) Claim 63 is confusing because although the preamble and final step refer to a "transcription profile", there is nothing in the other active steps relating to such a profile. In other words, it would appear that critical subject matter for understanding how the method relates to a transcription profile is missing. Clarification is required.

Application/Control Number

Art Unit: 1637

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-63 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-51 of copending Application No. 10/387,286. Although the conflicting claims are not identical, they are not patentably distinct from each other because of a genus-species type relationship.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Application/Control Number: 10/719,185

Art Unit: 1637

5. Claims 1-63 are free of the prior art, but are rejected for other reasons. No claims are allowable. These claims require a "real-time" amplification procedure comprising removing an aliquot from an amplification reaction during the amplification regimen and separating nucleic acids in said aliquot. The closest prior art is the Sanchez-Vega abstract, which teaches a method combining features of real-time PCR and capillary electrophoresis. In this method, however, separation of nucleic acids by capillary electrophoresis occurs "immediately following" (in other words, after) real-time PCR, not in an aliquot taken during the amplification regimen. This is substantiated in the later Sanchez-Vega et al. November 2002 publication, which is not prior art. Li et al. is made of record as it teaches a real-time PCR method wherein aliquots are removed during the amplification regimen; however, as the instant application receives benefit of the provisional '045 application associated with the parent '286 non-provisional application, Li et al. is not prior art.
